Nonlinear Programming: Theory and Algorithms By Mokhtar S. Bazaraa, Hanif D. Sherali, C. M. Shetty

COMPREHENSIVE COVERAGE OF NONLINEAR PROGRAMMING THEORY AND ALGORITHMS, THOROUGHLY REVISED AND EXPANDED

Nonlinear Programming: Theory and Algorithms—now in an extensively updated Third Edition—addresses the problem of optimizing an objective function in the presence of equality and inequality constraints. Many realistic problems cannot be adequately represented as a linear program owing to the nature of the nonlinearity of the objective function and/or the nonlinearity of any constraints. The *Third Edition* begins with a general introduction to nonlinear programming with illustrative examples and guidelines for model construction.

Concentration on the three major parts of nonlinear programming is provided:

- Convex analysis with discussion of topological properties of convex sets, separation and support of convex sets, polyhedral sets, extreme points and extreme directions of polyhedral sets, and linear programming
- Optimality conditions and duality with coverage of the nature, interpretation, and value of the classical Fritz John (FJ) and the Karush-Kuhn-Tucker (KKT) optimality conditions; the interrelationships between various proposed constraint qualifications; and Lagrangian duality and saddle point optimality conditions
- Algorithms and their convergence, with a presentation of algorithms for solving both unconstrained and constrained nonlinear programming problems

Important features of the *Third Edition* include:

- New topics such as second interior point methods, nonconvex optimization, nondifferentiable optimization, and more
- Updated discussion and new applications in each chapter
- Detailed numerical examples and graphical illustrations
- Essential coverage of modeling and formulating nonlinear programs
- Simple numerical problems
- Advanced theoretical exercises

The book is a solid reference for professionals as well as a useful text for students in the fields of operations research, management science, industrial engineering, applied mathematics, and also in engineering disciplines that deal with analytical optimization techniques. The logical and self-contained format uniquely covers nonlinear programming techniques with a great depth of information and an abundance of valuable examples and illustrations that showcase the most current advances in nonlinear problems.

Editorial Review

Review

"The promotional message on the back cover proclaims 'this book is a solid reference for professionals and a useful text for students...'; and I fully agree." (*Technometrics*, February 2007)

"Noted and recommended for its logical format and sharp editing that never wavers in its focus." (*Electric Review*, September/October 2006)

"...highly recommended for a course in the theory of nonlinear programming..." (*MAA Reviews*, July 17, 2006)

'... 'the Bazaraa' is a must if you are interested in optimization...' (*Journal of the Operational Research Society*, 2007)

From the Publisher

Presents recent developments of key topics in nonlinear programming using a logical and self-contained format. Divided into three sections that deal with convex analysis, optimality conditions and duality, computational techniques. Precise statements of algorithms are given along with convergence analysis. Each chapter contains detailed numerical examples, graphical illustrations and numerous exercises to aid readers in understanding the concepts and methods discussed.

The book is a solid reference for professionals as well as a useful text for students in the fields of operations research, management science, industrial engineering, applied mathematics, and also in engineering disciplines that deal with analytical optimization techniques. The logical and self-contained format uniquely covers nonlinear programming techniques with a great depth of information and an abundance of valuable examples and illustrations that showcase the most current advances in nonlinear problems.

Users Review

From reader reviews:

Aaron Powers:

What do you in relation to book? It is not important along with you? Or just adding material when you really need something to explain what you problem? How about your spare time? Or are you busy person? If you don't have spare time to perform others business, it is make you feel bored faster. And you have spare time? What did you do? All people has many questions above. They have to answer that question due to the fact just their can do in which. It said that about reserve. Book is familiar in each person. Yes, it is suitable. Because start from on jardín de infancia until university need this particular Nonlinear Programming: Theory and Algorithms to read.

Olga Snider:

Do you one among people who can't read satisfying if the sentence chained in the straightway, hold on guys this specific aren't like that. This Nonlinear Programming: Theory and Algorithms book is readable by means of you who hate those straight word style. You will find the data here are arrange for enjoyable looking at experience without leaving perhaps decrease the knowledge that want to offer to you. The writer involving Nonlinear Programming: Theory and Algorithms content conveys objective easily to understand by lots of people. The printed and e-book are not different in the content but it just different such as it. So , do you nevertheless thinking Nonlinear Programming: Theory and Algorithms is not loveable to be your top record reading book?

Cary Freeman:

Do you have something that you like such as book? The e-book lovers usually prefer to choose book like comic, small story and the biggest an example may be novel. Now, why not attempting Nonlinear Programming: Theory and Algorithms that give your enjoyment preference will be satisfied by simply reading this book. Reading behavior all over the world can be said as the opportunity for people to know world a great deal better then how they react towards the world. It can't be said constantly that reading addiction only for the geeky individual but for all of you who wants to become success person. So , for every you who want to start reading as your good habit, you could pick Nonlinear Programming: Theory and

Algorithms become your personal starter.

Jeffrey Chambers:

You may spend your free time to study this book this e-book. This Nonlinear Programming: Theory and Algorithms is simple bringing you can read it in the playground, in the beach, train and also soon. If you did not get much space to bring often the printed book, you can buy the e-book. It is make you better to read it. You can save typically the book in your smart phone. So there are a lot of benefits that you will get when one buys this book.
