Cognitive Architecture: Designing for How We Respond to the Built Environment By Ann Sussman, Justin B Hollander

Winner of the Environmental Design Research Association 2016 Place Research Award!

In *Cognitive Architecture*, the authors review new findings in psychology and neuroscience to help architects and planners better understand their clients as the sophisticated mammals they are, arriving in the world with built-in responses to the environment that have evolved over millennia.

The book outlines four main principles---Edges Matter, the fact people are a thigmotactic or a 'wall-hugging' species; Patterns Matter, how we are visually-oriented; Shapes Carry Weight, how our preference for bilateral symmetrical forms is biological; and finally, Storytelling is Key, how our narrative proclivities, unique to our species, play a role in successful place-making. The book takes an inside-out approach to design, arguing that the more we understand human behavior, the better we can design for it. The text suggests new ways to analyze current designs before they are built, allowing the designer to anticipate a user's future experience. More than one hundred photographs and drawings illustrate its key concepts. Six exercises and additional case studies suggest particular topics - from the significance of face-processing in the human brain to our fascination with fractals - for further study.

Editorial Review

Review

'The authors' intent to "encourage many more creative approaches to the [design] task, and not proscribe one specific architectural or planning style" has been achieved, and within an admirably compact compass.'

Harold Henderson, Planning Magazine

'At a time where architecture is all about spectacle, Hollander and Sussman remind us in *Cognitive Architecture* that buildings and cities profoundly affect our lives. Design impacts our senses, our psyche and our disposition, drawing on our history and our evolution as a species. The book brings us back to fundamentals, insisting that architectural design must consider and respond to our basic sensibilities. It returns architectural discourse to a place where the public at large can partake in the assessment of the built environment.'

Moshe Safdie, international architect and founder of Safdie Architects

'*Cognitive Architecture* is an important and insightful book that significantly links our responses to seemingly lifeless buildings to the very foundations of our inborn affinity for life. It takes our ancient intuitions about bringing buildings to life into the modern realm of rapidly unfolding discoveries in evolutionary biology and neuroscience. It critically goes beyond theory and science to the application of this knowledge to a better and more beneficial architecture and urban design.'

Stephen R. Kellert, Professor Emeritus and Senior Research Scholar, Yale University, and author of "Birthright: People and Nature in the Modern World."

'*Cognitive Architecture* is an inspiring book which introduces the reader to our sense of aesthetics that is at the core of human cognition in which we shape our built environment. This book will be of great value to architects, environmentalists, designers, geographers and planners, as well as students of those fields.'

Andreas Luescher, a Swiss architect and professor of architecture and environmental design, Bowling Green State University, Ohio

'Buildings are intended to be viewed, traversed, and lived in by people, but theoreticians and practitioners of architecture have rarely thought deeply about human nature and why and how it needs to be taken seriously when designing buildings and urban areas. In this short book, one of a small but growing number of contributions that are rectifying this deficiency, Sussman and Hollander clearly describe why our attraction to edges, faces, symmetry, curves, and stories, all of which have deep evolutionary roots, should influence architecture and urban design. Every person who wishes to design buildings should read and internalize the message of this book before putting pen to paper.'

Gordon H. Orians, Professor Emeritus of Biology, University of Washington, Seattle (Author of "Snakes, Sunrises, and Shakespeare. How Evolution Shapes Our Loves and Fears")

'As most apparent in the student exercises at the end of each chapter, this slender volume is didactic; those desiring a greater awareness of their built environments may find it useful. Summing Up: Recommended. All readership levels.'

CHOICE, A. J. Wharton, Duke University

'Sussman and Hollander have delivered a major advance in the creative union of human biology and architecture in the service of happiness.'

Edward O. Wilson, University Professor Emeritus, Harvard University, USA

'Cognitive Architecture expands the dialogue relating to communities and the urban environment by

integrating research from seemingly unrelated fields into the design discourse. As a result of this approach, the book is one that is relevant across a wide array of disciplines, either situated in design or within other fields. In this regard, the book can also add an additional layer of depth and context to other social disciplines that evaluate the cognitively based relationships between people and their environments, including environmental psychology, place attachment, and even tourism.' - **Courtney Grunninger Bonney, Clemson University**

About the Author

Ann Sussman, AIA, an architect, works as an artist, writer and community organizer. With Justin Hollander, she created the *Open Neighborhood Project*, using art, craft and technological tools to increase public participation in planning, and earning the Commonwealth's "Gold Star Award" in 2010. Her studio is at ArtScape in the Bradford Mill, an art and business enclave in Concord, Massachusetts, USA.

Justin Hollander, PhD, AICP is an Associate Professor in the Department of Urban and Environmental Policy and Planning at Tufts University, Medford, Massachusetts, USA, and the author of three previous books on city planning and design: *Polluted and Dangerous* (2009), *Principles of Brownfield Regeneration* (2010), and *Sunburnt Cities* (2011).

Users Review

From reader reviews:

Nancy Adams:

Here thing why this kind of Cognitive Architecture: Designing for How We Respond to the Built Environment are different and trustworthy to be yours. First of all studying a book is good but it really depends in the content of computer which is the content is as tasty as food or not. Cognitive Architecture: Designing for How We Respond to the Built Environment giving you information deeper since different ways, you can find any book out there but there is no e-book that similar with Cognitive Architecture: Designing for How We Respond to the Built Environment. It gives you thrill examining journey, its open up your eyes about the thing this happened in the world which is maybe can be happened around you. You can easily bring everywhere like in playground, café, or even in your approach home by train. For anyone who is having difficulties in bringing the published book maybe the form of Cognitive Architecture: Designing for How We Respond to the Built Environment in e-book can be your alternate.

Michael Banks:

In this particular era which is the greater person or who has ability in doing something more are more precious than other. Do you want to become considered one of it? It is just simple solution to have that. What you have to do is just spending your time not much but quite enough to get a look at some books. One of the books in the top list in your reading list is Cognitive Architecture: Designing for How We Respond to the Built Environment. This book that is qualified as The Hungry Mountains can get you closer in becoming precious person. By looking way up and review this publication you can get many advantages.

Randy Gable:

That publication can make you to feel relax. That book Cognitive Architecture: Designing for How We Respond to the Built Environment was multi-colored and of course has pictures on the website. As we know that book Cognitive Architecture: Designing for How We Respond to the Built Environment has many kinds or style. Start from kids until teens. For example Naruto or Investigator Conan you can read and feel that you are the character on there. Therefore , not at all of book are generally make you bored, any it makes you feel happy, fun and loosen up. Try to choose the best book in your case and try to like reading that.

Evan Miller:

A lot of reserve has printed but it is different. You can get it by world wide web on social media. You can choose the most effective book for you, science, witty, novel, or whatever by searching from it. It is referred to as of book Cognitive Architecture: Designing for How We Respond to the Built Environment. You can add your knowledge by it. Without departing the printed book, it could add your knowledge and make anyone happier to read. It is most crucial that, you must aware about publication. It can bring you from one destination for a other place.
