**Scientific Farm Animal Production (9th Edition)** By Robert E. Taylor, Tom G. Field

The ninth edition of this best-selling book examines the biological principles, scientific relationships, and management practices of livestock production. Blending the discussion of science, disciplines and industries, it effectively introduces readers to Animal Science using a breadth and depth that is unparalleled. Following a logical organization, it first discusses animal products, then basic biological principles (growth, genetics, reproduction, nutrition, health, etc.) and finally the feeding, breeding and management of primary livestock industries. It also gives readers insight into the societal issues surrounding the livestock industry and an overview of the careers and opportunities available within the field.

## **Editorial Review**

From the Inside Flap

Preface

Scientific Farm Animal Production is distinguished by an appropriate combination of both breadth and depth of livestock and poultry production and their respective industries. The book gives an overview of the biological principles applicable to the Animal Sciences, with chapters on reproduction, genetics, nutrition, lactation, consumer products, and other subjects. The book also covers the breeding, feeding, and management of beef cattle, dairy cattle, horses, sheep, swine, poultry, goats, and aquaculture. Although books have been written on each of these separate subjects, the authors have highlighted the significant biological principles, scientific relationships, and management practices in a condensed but informative manner. **TARGET AUDIENCE**

This book is designed as a text for the introductory Animal Science course typically taught at universities and junior or community colleges. It is also a valuable reference book for livestock producers, vocational agriculture instructors, and others desiring an overview of livestock production principles and management. The book is basic and sufficiently simple for urban students with limited livestock experience, yet challenging for students who have a livestock production background. **KEY FEATURES**

Chapters 1-9 cover animal products and give an overview of the livestock and poultry industries, Chapters 10-22 discuss the biological principles, while livestock, poultry, and aquaculture management practices are presented in Chapters 23-38.

The glossary of the terms used throughout the book has been expanded so students can readily become familiar with animal science terminology. The bold-lettered words in the text are included in the glossary.

Many illustrations in the form of photographs and line drawings are used throughout the book to communicate key points and major relationships. If "a picture is worth a thousand words," the numerous photographs and drawings expand the usefulness of the book beyond its pages.

Selected references are provided for each chapter to direct students into greater depth and breadth as they become intrigued with certain topics. Instructors can also use the references to expand their knowledge in current background material. Also included in the selected-references sections are references to visuals that relate to the specific chapter. Instructors are encouraged to review these visuals and use those that will enrich their courses. **USING THE BOOK**

The book is designed to accommodate several instructional approaches to teaching the introductory course: (1) the life-cycle biological principles approach, including such areas as consumer products, reproduction, breeding, nutrition, and animal health; (2) the species approach (teaching the course primarily in reference to the various species); or (3) a combination of the previous two. The latter appears to be the most popular teaching approach, covering principles in lecture and combining principles and species into laboratory exercises.

Some instructors will assign one or more papers on a topic selected by them or the students. The references at the end of each chapter are designed for students who want or need to explore certain topics in more depth.

Most instructors will not have sufficient time in their courses to assign all the chapters. Course outlines can be developed to include the chapters assigned and put them in the sequence that meets an instructor's

preference. CHANGES IN THIS EDITION

This edition has been updated with current technical and applied information. Whenever possible, tables and figures have been revised with current data. A chapter on aquaculture has been added to the text, and major revisions of the careers chapter (37), the species breeding and management chapters (25-36), and the reproduction chapter (10) have been made. This revision provides more detail in terms of selection strategies and tools, management benchmarks, endocrinology, and food safety issues. The emphasis on bioeconomics and global perspectives has been continued. A list of useful Web sites is provided to allow students and faculty the opportunity to explore a variety of information sources that complement the text. The addition of a CD-ROM that provides interactive study questions for each chapter also adds to the value of this edition.

From the Back Cover

*Scientific Farm Animal Production* presents all of the necessary information pertaining to successful breeding, feeding, and management of the following:

- beef cattle
- dairy cattle
- horses
- sheep
- swine
- poultry
- goats
- aquaculture

while also providing an overview of the principles applicable to the animal sciences with chapters on Genetics, Reproduction, Lactation, Growth and Development, Nutrition, Animal Behavior, Consumer Products, Careers in the Industry, and other essential topics.

*Scientific Farm Animal Production*, written for the introductory animal science course typically taught at universities and junior or community colleges, is also a valuable reference book for livestock producers, vocational agriculture instructors, and others desiring an overview of livestock production principles and management. With coverage that meets the needs of an urban audience while challenging the reader who may have a background in livestock production, the seventh edition of this trusted text continues to represent the standard for comprehensive, balanced, and authoritative coverage.

About the Author

**Robert E. Taylor** was raised on an Idaho livestock operation where several livestock species were produced. He received a B.S. degree in animal husbandry and a Master's degree in animal production from Utah State University. This background, combined with his Ph.D. work in animal breeding and physiology from Oklahoma State University, provided much depth to his knowledge of livestock production. He has had practical production experience with beef cattle, dairy cattle, horses, poultry, sheep, and swine.

Dr. Taylor received teaching awards at Iowa State University (where he also managed a swine herd) and at Colorado State University. He also received the Distinguished Teaching Award from the American Society of Animal Science in recognition of his ability to organize and present materials to students. Many of his concepts for effective teaching are used in this book. Dr. Taylor passed away in 1998.

**Thomas G. Field** was raised on a Colorado cow-calf and seedstock enterprise. He managed a seedstock herd of cattle after completing his B.S. degree. A competitive horseman as a youth, he has had practical

experience with seedstock cattle, commercial cow-calf production, stockers, and horses. He has a B.S., M.S., and Ph.D. in animal science from Colorado State University.

Dr. Field has received teaching awards from the USDA National Excellence in Teaching program, the National Association of Colleges and Teachers of Agriculture, the American Society of Animal Sciences, and Colorado State University. Dr. Field is the teaching coordinator for the Department of Animal Sciences at Colorado State University and is responsible for coordinating the teaching herd.

## **Users Review**

### **From reader reviews:**

#### **William Fuller:**

Nowadays reading books become more than want or need but also get a life style. This reading habit give you lot of advantages. The benefits you got of course the knowledge the particular information inside the book that will improve your knowledge and information. The info you get based on what kind of reserve you read, if you want attract knowledge just go with training books but if you want sense happy read one together with theme for entertaining like comic or novel. Often the Scientific Farm Animal Production (9th Edition) is kind of reserve which is giving the reader unstable experience.

#### **Florence Booth:**

In this period globalization it is important to someone to receive information. The information will make anyone to understand the condition of the world. The fitness of the world makes the information easier to share. You can find a lot of sources to get information example: internet, newspaper, book, and soon. You will see that now, a lot of publisher that will print many kinds of book. The particular book that recommended for you is Scientific Farm Animal Production (9th Edition) this e-book consist a lot of the information of the condition of this world now. This book was represented how do the world has grown up. The dialect styles that writer use to explain it is easy to understand. The actual writer made some exploration when he makes this book. That is why this book ideal all of you.

#### **Armando Mosley:**

Beside this particular Scientific Farm Animal Production (9th Edition) in your phone, it could possibly give you a way to get more close to the new knowledge or facts. The information and the knowledge you might got here is fresh from the oven so don't become worry if you feel like an outdated people live in narrow small town. It is good thing to have Scientific Farm Animal Production (9th Edition) because this book offers for you readable information. Do you at times have book but you do not get what it's interesting features of. Oh come on, that will not end up to happen if you have this in the hand. The Enjoyable set up here cannot be questionable, including treasuring beautiful island. Use you still want to miss the idea? Find this book and read it from today!

#### **Troy Cochran:**

What is your hobby? Have you heard that question when you got learners? We believe that that query was given by teacher to their students. Many kinds of hobby, Everybody has different hobby. And you also know

that little person like reading or as reading through become their hobby. You should know that reading is very important and book as to be the factor. Book is important thing to include you knowledge, except your current teacher or lecturer. You discover good news or update about something by book. A substantial number of sorts of books that can you choose to adopt be your object. One of them are these claims Scientific Farm Animal Production (9th Edition).
