### **Eruptions that Shook the World** By Clive Oppenheimer

What does it take for a volcanic eruption to really shake the world? Did volcanic eruptions extinguish the dinosaurs, or help humans to evolve, only to decimate their populations with a super-eruption 73,000 years ago? Did they contribute to the ebb and flow of ancient empires, the French Revolution and the rise of fascism in Europe in the 19th century? These are some of the claims made for volcanic cataclysm. Volcanologist Clive Oppenheimer explores rich geological, historical, archaeological and palaeoenvironmental records (such as ice cores and tree rings) to tell the stories behind some of the greatest volcanic events of the past quarter of a billion years. He shows how a forensic approach to volcanology reveals the richness and complexity behind cause and effect, and argues that important lessons for future catastrophe risk management can be drawn from understanding events that took place even at the dawn of human origins.

### Editorial Review

#### Review

"I have to thank God on my knees that Oppenheimer's book did not exist at the time I made my decision to become a filmmaker. I might have become a volcanologist instead." Werner Herzog, Film director and producer

"With his characteristic sparkling brilliance, Oppenheimer expertly recasts the latest scientific findings on how volcanoes work as a compelling and readable account that conveys the enduring human fascination for Nature's fiery outbursts and their capacity to transform life on this planet." Professor Iain Stewart, Geologist and BBC TV presenter

"In his explosive book Clive Oppenheimer brilliantly shows how the history of volcanoes and people is a tangled account. From our earliest ancestors to travellers battling with the effects of ash clouds on airline flights, our evolutionary destiny has been played out in the shadow of volcanoes, often with disastrous results." Professor Clive Gamble, Archaeologist, Royal Holloway, University of London

"This is forensic geology in the widest sense and an exciting guided tour of the major volcanic and climatic disasters experienced by human kind. Oppenheimer has a rare talent for bringing the science and history together in a clear and engaging way." Professor Michael Rampino, Geologist, New York University

"Writing in his inimitably lively and witty style, Clive Oppenheimer takes us through deep time and deep into volcanoes, teaching us how they work and demonstrating how powerful eruptions have often jostled the human toehold on survival. This tour de force is an astonishingly provocative roadmap to the once and future history of Earth." Dr. Dave Pieri, Volcanologist, NASA Jet Propulsion Laboratory

"Oppenheimer romps through the geological past, detailing some of the major volcanic events and their global impact. ... well worth diving into." Kate Ravilious, New Scientist

"The hellfire-and-brimstone case studies ... seem like a product of a Hollywood screenwriter's imagination ... only they describe real events." Laurence A Marschall, Natural History October 2011

"Set out to make the average reader's murky perception of volcanoes a bit clearer, and managed to write a compelling tome fit for any to enjoy, coming as close to brilliant storytelling as a scientist is able...The more dry explanations were succinct, the exciting bits explored thoroughly and boredom averted completely. Oppenheimer made his prose modern by drawing comparisons with carefully chosen pop culture terms and euphemisms that should stay relevant for some time to come. 5 OUT OF 5 STARS" Meredith Greene, San Francisco Book Review

"Oppenheimer uses all sorts of evidence to unravel the stories behind some of the greatest and most significant volcanic cataclysms. ... I recommend Eruptions That Shook the World" Don L. Anderson, Physics Today

"...Oppenheimer explores the entanglement of human history and volcanic activity with rare and insightful brilliance....This book should be on the shelves of all volcanologists, historians, and environmental planners. It is a lively read for all citizens concerned with human futures." -T. L. T. Grose, CHOICE

#### About the Author

Clive Oppenheimer is a Reader in Volcanology and Remote Sensing at the University of Cambridge and a

Research Associate of 'Le Studium' Institute for Advanced Studies at ISTO (University of Orléans/CNRS). His research focuses on understanding the chemistry and physics of volcanism, and the climatic and human impacts of eruptions in antiquity. He has carried out fieldwork worldwide in collaboration with archaeologists, atmospheric scientists and other geologists. Since 2003, he has studied the lava lake of Erebus volcano with the US Antarctic Program. In 2005 the Royal Geographical Society presented him with the Murchison Award 'for publications enhancing the understanding of volcanic processes and impacts'. Dr Oppenheimer is a co-author with Peter Francis of a leading volcanology textbook and has contributed widely to television and film documentaries on volcanoes, including Werner Herzog's 'Encounters at the End of the World' and most recently, for Discovery, the History Channel, the BBC, Teachers' TV and National Geographic.

## **Users Review**

### **From reader reviews:**

#### **Christopher Slowik:**

A lot of people always spent their own free time to vacation or maybe go to the outside with them loved ones or their friend. Do you realize? Many a lot of people spent that they free time just watching TV, as well as playing video games all day long. If you wish to try to find a new activity honestly, that is look different you can read some sort of book. It is really fun to suit your needs. If you enjoy the book that you read you can spent all day every day to reading a book. The book Eruptions that Shook the World it is quite good to read. There are a lot of individuals who recommended this book. They were enjoying reading this book. In case you did not have enough space bringing this book you can buy the actual e-book. You can m0ore easily to read this book from the smart phone. The price is not too costly but this book provides high quality.

#### **Hazel Polk:**

Eruptions that Shook the World can be one of your basic books that are good idea. We recommend that straight away because this publication has good vocabulary that will increase your knowledge in language, easy to understand, bit entertaining but still delivering the information. The copy writer giving his/her effort to place every word into pleasure arrangement in writing Eruptions that Shook the World yet doesn't forget the main point, giving the reader the hottest as well as based confirm resource facts that maybe you can be certainly one of it. This great information could drawn you into brand new stage of crucial thinking.

#### **Harry Fulford:**

Are you kind of busy person, only have 10 or even 15 minute in your day time to upgrading your mind expertise or thinking skill possibly analytical thinking? Then you have problem with the book than can satisfy your limited time to read it because this all time you only find guide that need more time to be study. Eruptions that Shook the World can be your answer since it can be read by an individual who have those short free time problems.

#### **Pam Boyd:**

A lot of publication has printed but it takes a different approach. You can get it by internet on social media. You can choose the most beneficial book for you, science, amusing, novel, or whatever through searching

from it. It is identified as of book Eruptions that Shook the World. Contain your knowledge by it. Without leaving behind the printed book, it could possibly add your knowledge and make anyone happier to read. It is most critical that, you must aware about book. It can bring you from one destination for a other place.
