**Research Methods in Applied Settings: An Integrated Approach to Design and Analysis, Second Edition** By Jeffrey A. Gliner, George A. Morgan, Nancy L. Leech

Through its integrated approach to quantitative research methods, this text teaches readers how to plan, conduct, and write a research project and select and interpret data so they can become better consumers of research. This is not a statistics book—there are very few formulas. Rather, this book helps students master which statistic to use when and how to interpret the results. Organized around the steps one takes in conducting a research project, this book is ideal for applied programs and for those who want to analyze and evaluate research articles. Having taught in a variety of departments, the authors have a good grasp of the research problems faced by master's and doctoral students in diverse areas of the behavioral and social sciences.

Text adopters applaud the book's clarity. Students are often confused by other texts' use of inconsistent terminology. To avoid this confusion, the authors present a semantically consistent picture that emphasizes five research approaches-- randomized experimental, quasi-experimental, comparative, associational, and descriptive. The authors then show how these approaches lead to three kinds of research designs which, in turn, lead to three groups of statistics with the same names. This consistent framework increases comprehension and the ability to apply the material. Numerous applied problems, annotated examples, and diagrams and tables further promote comprehension. Although the book emphasizes quantitative research, the value of qualitative research is introduced.

This extensively revised edition features more than 50% new material including:

1. A new chapter on the evidence-based approach that emphasizes the importance of reporting confidence intervals and effect sizes and the increased use of meta-analysis.
  
2. An increased emphasis on evaluating research including an 8 step plan for evaluating research validity (Chs. 23 & 24) and its application to the 5 sample studies used throughout the book (Ch. 25).
  
3. Lots of practical advice on planning a research project (Ch. 2), data collection and coding (Ch. 15), writing the research report (Ch. 27), questions to use in evaluating a research article (Appendix E) and creating APA tables and figures (Appendix F).
  
4. A new chapter on non-experimental approaches/designs (Ch. 7) including qualitative research.
  
5. Web resources for students including critical thinking problems with answers and a sample outline of a research proposal.
  
6. An earlier and expanded introduction to measurement reliability and validity to further emphasize their differences and importance.
  
7. An extensively revised chapter on measurement validity consistent with the latest APA/AERA/NCME standards.

8. Fewer chapters on inferential statistics with an increased focus on how their selection is related to the design of the study and how to interpret the results using significance testing and effect sizes and confidence intervals.
  
9. Instructor's Resources with Power Points, test questions, answers to the application questions, and more.

Intended for graduate research or quantitative/experimental methods/design courses in psychology, education, human development and family studies, and other behavioral, social, business, and health sciences, independent sections and chapters can be read in many orders allowing for flexibility in assigning topics. Due to its practical approach, this book also appeals to researchers and clinicians. Prior exposure to statistics and research methods is recommended.

### Editorial Review

#### Review

*"This is a unique textbook that provides an integrated, step-by-step approach to designing quantitative studies, in which methods are linked explicitly to research questions. The numerous figures, tables, and diverse examples make the book both reader-friendly and far-reaching."* - **Anthony J. Onwuegbuzie, Sam Houston State University, USA**

*"This comprehensive textbook provides excellent coverage of the process of designing quantitative studies. The clearly written content helps readers conceptualize the research process from start to finish, thereby making this an excellent textbook for graduate courses."* - **Kathleen M. T. Collins, University of Arkansas, USA**

*"One of the appeals of this text is the clarity, writing style, and discussion of the quantitative and qualitative paradigms... A separate section for planning and conducting a research project [is] a great addition... the authors' clear explanations ... is the strength of this text. I appreciate that the authors will discuss effect sizes throughout ... this is incredibly important information for students to learn."* - **Kimberly S. Maier, Michigan State University, USA**

*"An essential textbook for quantitative research ... [It] ...is well written... The application problems are helpful for students... Students like the textbook."* - **Jie Hu, University of North Carolina at Greensboro, USA**

#### About the Author

**Jefferey A. Gliner** is Professor Emeritus of Occupational Therapy at Colorado State University. He received his Ph.D. in psychology from Bowling Green State University and taught of graduate level research methods, statistics, and program evaluation courses to masters and doctoral level students for more than 20 years.

**George A. Morgan** is a Professor Emeritus of Education and Human Development at Colorado State University. He received his Ph.D. in child development and psychology from Cornell University. He taught research methods and applied statistics to graduate students in several departments at Colorado State. In addition to writing textbooks on SPSS and research methods, he currently advises students on their dissertation research.

**Nancy Leech** is an Associate Professor at the University of Colorado in Denver. She received her Ph.D. in education with an emphasis on research and statistics from Colorado State University in 2002. Dr. Leech is currently teaching graduate level courses in research, statistics, and measurement.

### Users Review

#### From reader reviews:

**Eleanor Sotomayor:**

Book is definitely written, printed, or illustrated for everything. You can understand everything you want by a guide. Book has a different type. As it is known to us that book is important factor to bring us around the world. Beside that you can your reading expertise was fluently. A publication Research Methods in Applied Settings: An Integrated Approach to Design and Analysis, Second Edition will make you to always be smarter. You can feel a lot more confidence if you can know about every little thing. But some of you think this open or reading any book make you bored. It is not necessarily make you fun. Why they are often thought like that? Have you trying to find best book or acceptable book with you?

**Kayla Wilson:**

What do you concerning book? It is not important together with you? Or just adding material when you really need something to explain what the one you have problem? How about your extra time? Or are you busy individual? If you don't have spare time to perform others business, it is make you feel bored faster. And you have free time? What did you do? Everyone has many questions above. They have to answer that question due to the fact just their can do which. It said that about guide. Book is familiar in each person. Yes, it is right. Because start from on pre-school until university need this Research Methods in Applied Settings: An Integrated Approach to Design and Analysis, Second Edition to read.

**Jessica Seymore:**

The reserve with title Research Methods in Applied Settings: An Integrated Approach to Design and Analysis, Second Edition contains a lot of information that you can study it. You can get a lot of gain after read this book. This book exist new expertise the information that exist in this book represented the condition of the world right now. That is important to yo7u to find out how the improvement of the world. This particular book will bring you with new era of the the positive effect. You can read the e-book in your smart phone, so you can read that anywhere you want.

**Mary Barnett:**

In this time globalization it is important to someone to receive information. The information will make someone to understand the condition of the world. The healthiness of the world makes the information better to share. You can find a lot of personal references to get information example: internet, magazine, book, and soon. You can observe that now, a lot of publisher that will print many kinds of book. Often the book that recommended for your requirements is Research Methods in Applied Settings: An Integrated Approach to Design and Analysis, Second Edition this publication consist a lot of the information from the condition of this world now. That book was represented how can the world has grown up. The vocabulary styles that writer require to explain it is easy to understand. Often the writer made some exploration when he makes this book. Here is why this book acceptable all of you.
