**Design for Manufacturability and Statistical Design: A Constructive Approach (Integrated Circuits and Systems)** By Michael Orshansky, Sani Nassif, Duane Boning

Design for Manufacturability and Statistical Design: A Comprehensive Approach presents a comprehensive overview of methods that need to be mastered in understanding state-of-the-art design for manufacturability and statistical design methodologies. Broadly, design for manufacturability is a set of techniques that attempt to fix the systematic sources of variability, such as those due to photolithography and CMP. Statistical design, on the other hand, deals with the random sources of variability. Both paradigms operate within a common framework, and their joint comprehensive treatment is one of the objectives of this book and an important differentiation.

## **Editorial Review**

From the Back Cover

*Design for Manufacturability and Statistical Design: A Constructive Approach* provides a thorough treatment of the causes of variability, methods for statistical data characterization, and techniques for modeling, analysis, and optimization of integrated circuits to improve yield. The objective of the constructive approach developed in this book is to formulate a consistent set of methods and principles necessary for rigorous statistical design and design for manufacturability from device physics to large-scale circuit optimization. The segments of the book are devoted, respectively, to

1. understanding the causes of variability;
2. design of test structures for variability characterization;
3. statistically rigorous data analysis;
4. techniques of design for manufacturability in lithography and in chemical mechanical polishing;
5. statistical simulation, analysis, and optimization techniques for improving parametric yield.

*Design for Manufacturability and Statistical Design: A Constructive Approach* presents an overview of the methods that need to be mastered for state-of-the-art design for manufacturability and statistical design methodologies. It is an important reference for practitioners and students in the field of computer-aided design of integrated circuits.

## **Users Review**

**From reader reviews:**

**Jake Leslie:**

Now a day individuals who Living in the era where everything reachable by talk with the internet and the resources inside can be true or not involve people to be aware of each details they get. How many people to be smart in obtaining any information nowadays? Of course the answer is reading a book. Reading a book can help individuals out of this uncertainty Information specifically this Design for Manufacturability and Statistical Design: A Constructive Approach (Integrated Circuits and Systems) book because book offers you rich information and knowledge. Of course the knowledge in this book hundred percent guarantees there is no doubt in it you know.

**Anthony Thies:**

Hey guys, do you really want to find a new book you just read? Maybe the book with the concept Design for Manufacturability and Statistical Design: A Constructive Approach (Integrated Circuits and Systems) suitable to you? The book was written by a well-known writer in this era. The particular book titled Design for Manufacturability and Statistical Design: A Constructive Approach (Integrated Circuits and Systems) is one of several books which everyone reads now. This kind of book was inspired a number of people in the world. When you read this book you will enter the new way of measuring that you've never known before. The author explained their plan in a simple way, thus all of people can easily know the core of this e-book. This book will give you a wide range of information about this world now. To help you to see the represented of the world within this book.

**Sharon Bedgood:**

Reading a reserve tends to be a new life style in this era globalization. With studying you can get a lot of information that can give you benefit in your life. Using books everyone in this world can easily share their idea. Books can also inspire a lot of people. Lots of authors can inspire their particular reader with their story or even their experience. Not only the story that share in the guides. But also they write about the ability about something that you need example of this. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of books which exist now. The authors nowadays always try to improve their talent in writing, they also doing some investigation before they write to their book. One of them is this Design for Manufacturability and Statistical Design: A Constructive Approach (Integrated Circuits and Systems).

**Ronald Dotson:**

A lot of people always spent their very own free time to vacation or maybe go to the outside with their friends and family or their friend. Did you know? Many a lot of people spent their free time just watching TV, or maybe playing video games all day long. If you wish to try to find a new activity here is look different you can read a book. It is really fun for you. If you enjoy the book that you read you can spent all day long to reading a reserve. The book Design for Manufacturability and Statistical Design: A Constructive Approach (Integrated Circuits and Systems) it is quite good to read. There are a lot of individuals who recommended this book. These were enjoying reading this book. Should you did not have enough space to bring this book you can buy the actual e-book. You can more simply to read this book out of your smart phone. The price is not very costly but this book possesses high quality.
